1 1 An Autodesk representative says that the worst thing about AutoCAD is that you can't download the software and run it on any Windows PC. So you have to have the infrastructure in place, such as a PC with Windows operating system or a Mac running OSX. You don't have to do anything to get AutoCAD on that PC, it just shows up. 2 2 Once installed, you'll first be asked to activate your license and, to open it, you need to have an Autodesk account. If you don't have an account, click on "Sign In" at the top of the page and then click on "Create an Autodesk Account." That'll open up your website browser. 3 3 From there you can log in with your email address and password, or use your Facebook, LinkedIn, Google, Yahoo, or AOL credentials. The latter is the more secure of the two, but the former is fine and straightforward. 4 4 Once you're logged in, click on your name in the top left corner. You'll then see options to edit your profile or your current project. Click on the project name to view the project details. You can also manage or close your license, project, or other Autodesk features, and change your preferences. 5 5 Click on "Licensing and Products" in the top left, or click on the small magnifying glass icon to the left of the "Help" button, to see the different features you have access to: 6 6 This is where you'll find the "Autodesk Billing" tab where you can manage your autodesk account. Click on "View or Manage Autodesk Billing" to see your subscription, and other important information. 7 7 To check if your project is active, scroll down to the bottom of the project page and click on "Active Projects." 8 8 To change your account password, click on "Change Password," enter your current password, and then choose a new one. 9 9 You'll be able to find all your projects in the projects page as well, which is really handy if you're managing multiple projects. Here you can also access your license, license history
