jpeg2fits is a fast, light-weight and easy-to-use application designed to convert JPG graphical files to the FITS format. I have a 2rd party data source that has just a big ol' csv file. So I needed a tool which can read csv and let me search for some specific texts. Because I have my own software for this, it only works on my own computer, so I don't have the pleasure to test it. Solution: Csvcleaner. Csvcleaner is a program that you can use to clean a csv file. Csvcleaner can be used to test the cleanliness of a file or to clean up a file prior to or after the import of data into a database or other text program. Csvcleaner is a simple, reliable program that can be used in a range of situations. It is designed to be used for cleaning bad data. Csvcleaner can process many files simultaneously and will rapidly clean large numbers of records. The program is designed to leave the file in a consistent state to avoid corruption of the file. All you have to do is run the program, the first time it's run the program will ask you some questions and a wizard will guide you through the process of cleaning the csv file. You will be presented with options to either clean all records, check that they contain valid numbers, remove records if they are blank and remove records that contain illegal characters. You will also have the option to remove certain data, this gives you the chance to keep certain data, for example company names or vehicle names. The program can open over 100 files at the same time and is designed to do the job quickly. See also: How to fix PST issues using Free Trial software?
