In 2013, Google acquired AutoCAD and folded it into Google Earth. Google Earth is part of the Google Earth Engine platform that has been used to make several notable data visualizations, including the visualization of Earth's energy consumption. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. While primarily a desktop app, AutoCAD also runs on portable computers, including the Apple iPad (iOS and OS X), Microsoft Surface, and the web browser. Contents Automatically recording every change, auto-history saves the previous state of an object, allowing you to view its previous state and save it, modify it and reload it. In this way, you can recreate an object, experiment and verify its behavior before committing it to your drawing. Auto-history is great for experimentation. That is because it earned $3 million in its first two days on sale, which is higher than that of previous titles. The biggest change to the game is that it comes in the form of an endless runner. Players have to tap the screen to jump and avoid obstacles. There is also a multiplayer mode where players can compete to reach a high score. The game was created by Sean Murray, who joined forces with his brother Brendan Murray to create the studio behind other successful titles such as Happy Action Theater, The Unfinished Swan and Superbrothers: Sword & Sworcery EP. The success of the game has led to a lot of fans expressing interest in the next projects, while also making some suggestions as to what they would like to see next.
