@chirchirchoir - why did you ask for SAT

Import? And for which formats can you export the object? You can export and import all 3D solid objects in the SAT Import for Rhino. In this case when you export a model to SAT file the action consists in saving the file to the hard disk and to make the "export" command available in the "File > Export" menu.

When you import the file back in Rhinoceros it will be as a solid object. The most important things about the project is the license and that you can export from and import to ACIS SAT files. The next things I found are. It has a console and is distributed as a zip file The description says it is for Rhino 3 and Rhino 4 It gives you the ability to export and import 3D solids to SAT files. The license is

Microsoft standard and it allows you to reuse the source code for any purpose. You can download the source from here:

Thanks for the explanations... I must say that this one is very good! I am a CAD-expert and 3D-modeller at the moment so that SAT-import does have a big advantage. Since the time I started to learn Python, also the project SAT-Import has been a great help for my work. Because I have to do a lot of work with POV-Ray, I use the POV-Ray 3D-modelling software and SATImport is a great
