The first version of AutoCAD was sold under the name Computer-Aided Design on January 1, 1982, in a combination with a small CAD system called MasterCAD. The first three release versions of AutoCAD were built from source code from Centura (AutoCAD 1.0.1, 1.1, and 1.1.1) while later versions were built from Evans & Sutherland's Advanced-CAD code. Version 2.1 of AutoCAD was built from source code for MasterCAD and would be the first version of AutoCAD sold independently. The first commercially released version of AutoCAD was AutoCAD 2.0 on March 29, 1983. The first version to support the general public was AutoCAD 3.0 on December 2, 1985. There were other products throughout the 1980s that used the name "AutoCAD", including the 1986 Autodesk Alias product AutoCAD Alias. It was advertised as a "general purpose, graphical programming language" and there were also Autodesk CADDS (AutoCAD DESIGN Study) and Autodesk BasicDESC (AutoCAD DESIGN Study) products. In 1998, when AutoCAD 2002 was introduced, Alias was discontinued. AutoCAD 6 introduced the first fully interactive product. Its main characteristic is the "Hand-eye coordination" approach, in which objects are selected, moved, and snapped by moving the cursor and selecting an existing object. In earlier releases, users had to be familiar with commands in order to achieve the same results, though there was still an interactive mode available. The name "AutoCAD" appeared on a single button on the first keyboards. The name "AutoCAD" was printed on the buttons when the program first started, though this was changed when the 2.0 release came out. In this release, a new standard dialog was created called ca3bfb1094
