hereditary spherocytosis with and without
paroxysmal nocturnal hemoglobinuria.
Paroxysmal nocturnal hemoglobinuria

(PNH) is a disorder characterized by hemolytic anemia and reactive hemophagocytosis by bone marrow macrophages. PNH is caused by a somatic mutation of the PIG-A gene in the hematopoietic stem cells. Heritable spherocytosis (HS) is associated with deletion of the membrane protein band 3. In adults, it is generally coincident with PNH. We report three children with HS: two with PNH-related genotype (G, G/G genotype of the IVS-II-1 mutation) and one with a PIG-A deletion (deficient genotype of the C-deletion in exon 2). The two children with genotype (G, G/G) had completely cleared hemolysis by 5-6 months, and the third one had no further episodes of hemolysis. Transcranial Doppler ultrasonography (TCD) showed no significant difference between the patients with hemolytic crisis and those without crisis. Even after correction of the excessive hemolysis, the mean velocities

remained within the normal range. In three children with HS, TCD showed no significant difference between the patients with hemolytic crisis and those without crisis. After correction of the excessive hemolysis, mean velocities remained within normal range.

Anatomy of a Scam Share Leo speaks with a former FBI undercover agent about how scammers are spending their time in cyberspace, swiping from companies and then going right to it. “They’re stealing. They are killing. They’re doing things they shouldn’t be doing.” The transcript below has been lightly edited. Leo: I’ve always been fascinated with these guys. I mean, somebody’s doing this stuff all the time, it seems like, whether it’s fraud, hacking, identity theft. Mark: Yes. Leo:
