Though Adobe has included 37 new styles in the creative suite, it has been delayed until now. Lightroom's default presentation mode is "Smart Preview," which works quite well for most users. The new layered comp editing window was designed keeping in mind non-professional photographers and is quite intuitive. The main goal of this update is to provide a well-rounded experience for pro users. It allows those who want to edit images in the pixels (er, pixels) and those who want to work more visually to do so in one place. The help function, for example, provides tips how to edit and what all tools available are. The image-aware information pops up when you hover over an image or an adjustment.
